# Gene-for-gene interactions in strawberry

  
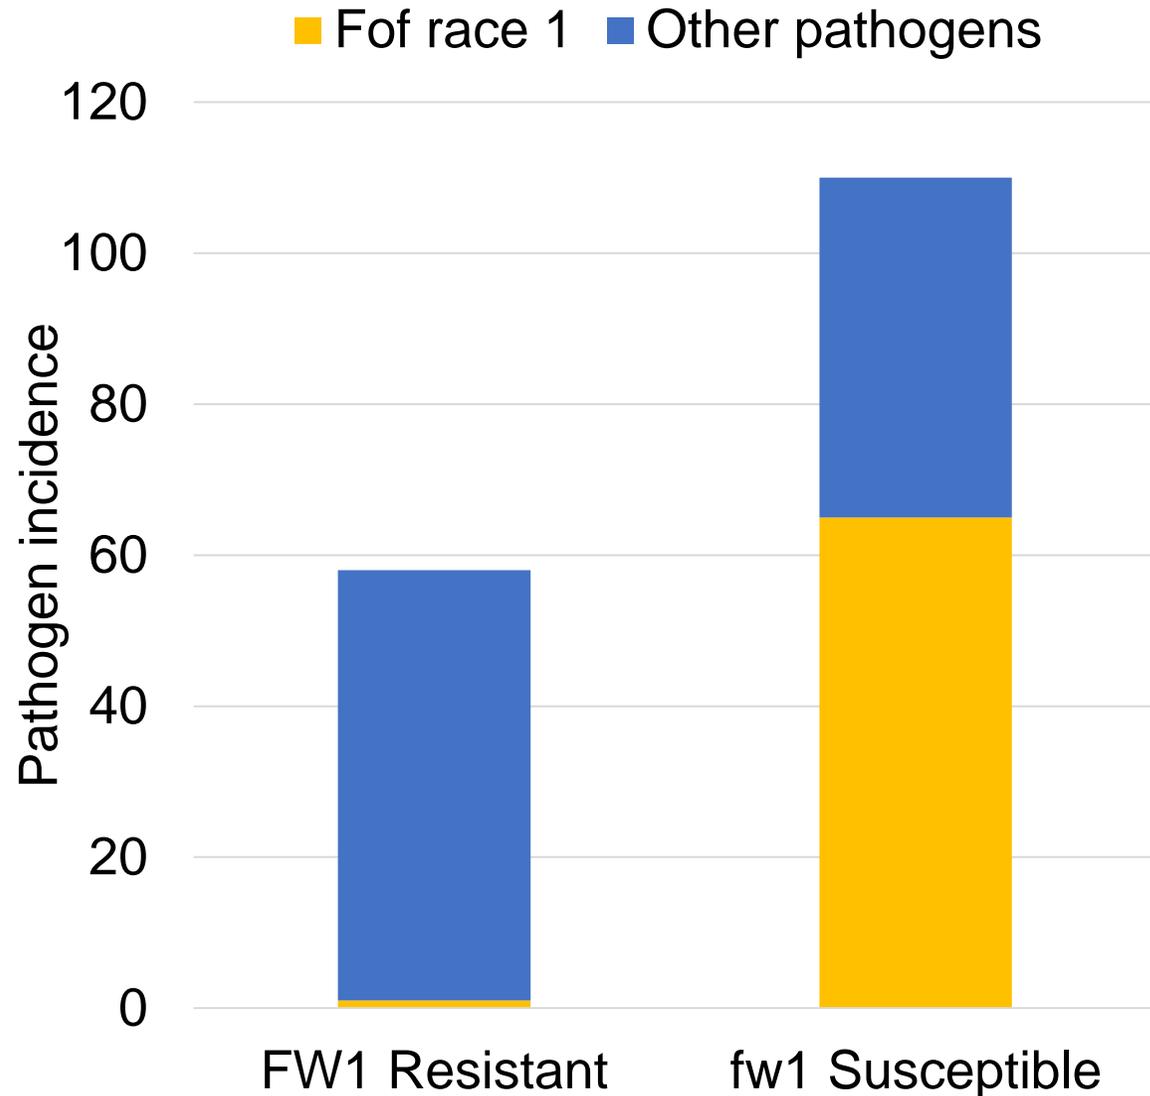

*Fof* race 1

  
*Fof* race 2

- *FW1* Resistant varieties:
  - Portola
  - Fronteras
  - San Andreas
  - Victor
  - Moxie

# Genetic resistance is key to managing Fusarium wilt

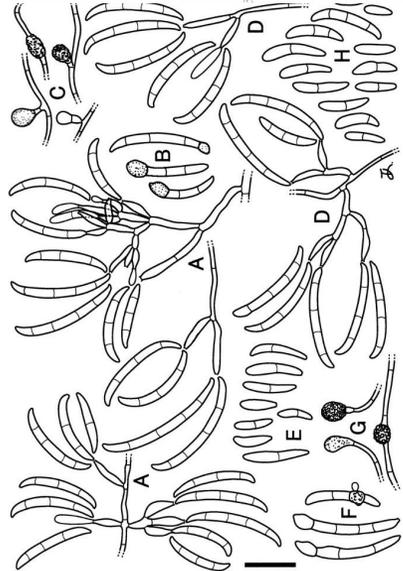

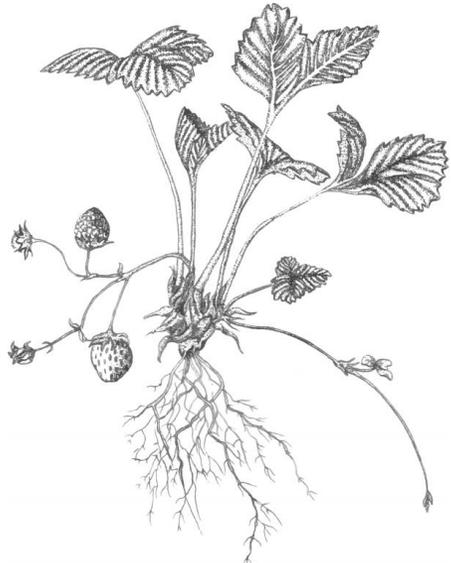

- In Watsonville/Salinas, Fusarium wilt is the most common disease on susceptible varieties.
- Results from ~150 diseased samples taken in
  - 2021 led by Cal Poly
  - 2022 led by USDA

- **Confirmed *Fof* race 2 in November, 2022**
- Summer-planted
- Portola (*FW1*-resistant)
- High wilt disease severity

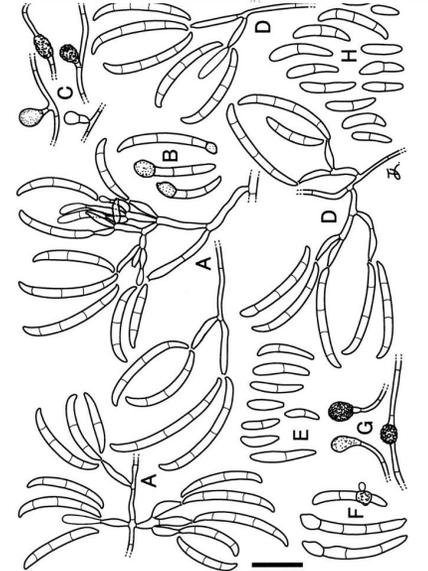

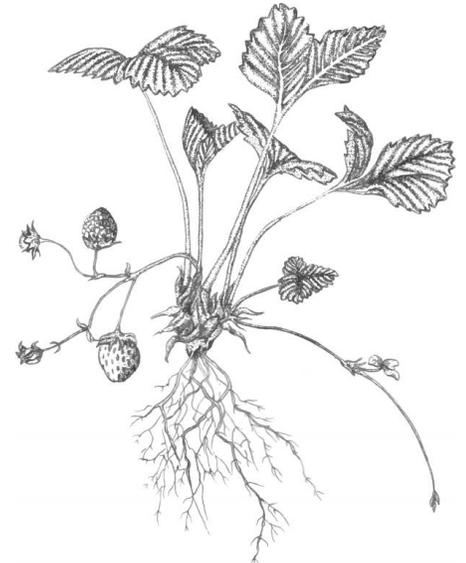

# Overview

Diagnostic methods  
development  
qPCR & RPA

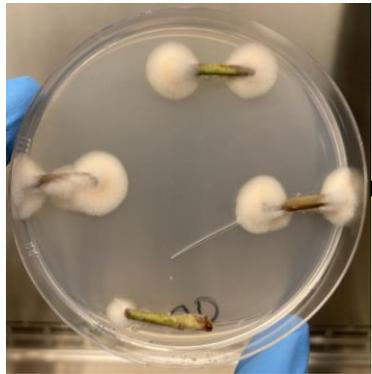

Surveillance for CA *Fof* race 2

Screening for resistant cultivars

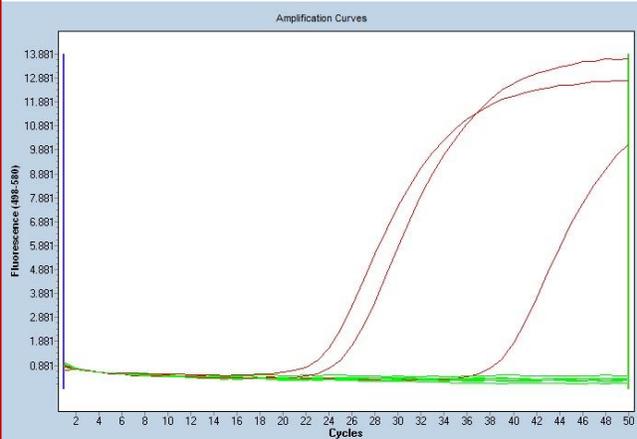

# Previous identification method (~8 week turnaround)

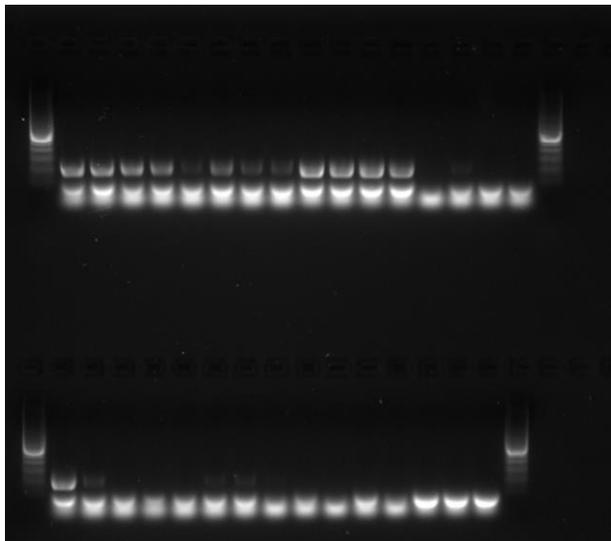

Petiole isolations  
&  
Single hyphal tip  
pure cultures

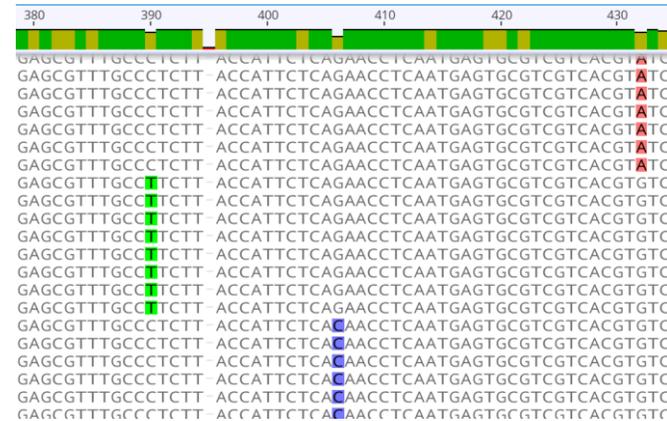

(-) for Burkhardt 2019 qPCR

(+) for Suga 2013 PCR

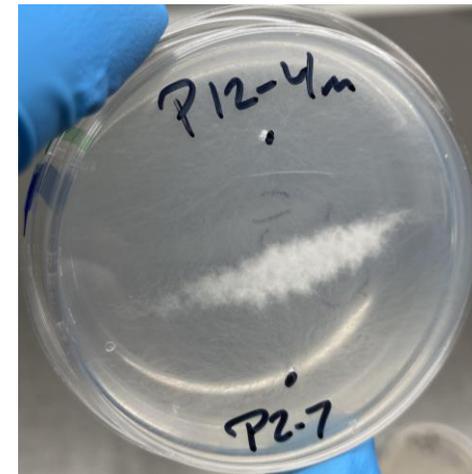

Sequence EF-1a gene

C->T  
transversion

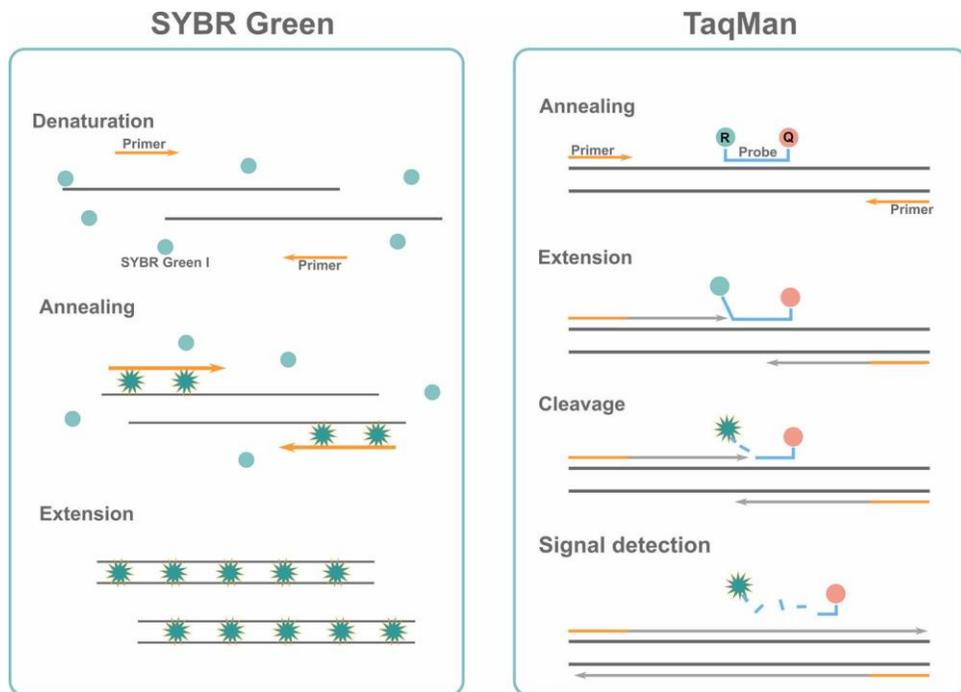

Somatic compatibility test

# qPCR vs. RPA assays

## qPCR

- Can be used on soil and plant samples
- Quantitative – better for measuring differences in pathogen abundance

## RPA (recombinase polymerase amplification)

- Currently only plant samples are supported
- Fast, simple, sensitive assays for plant sample

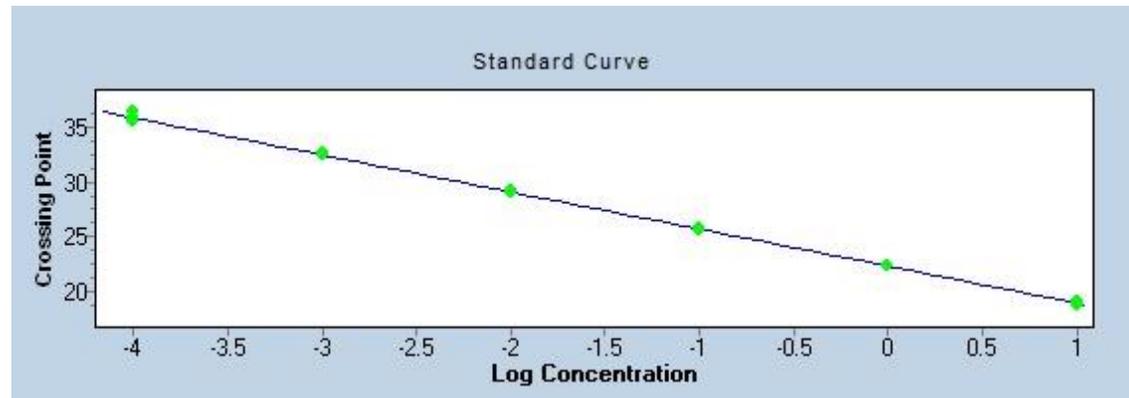

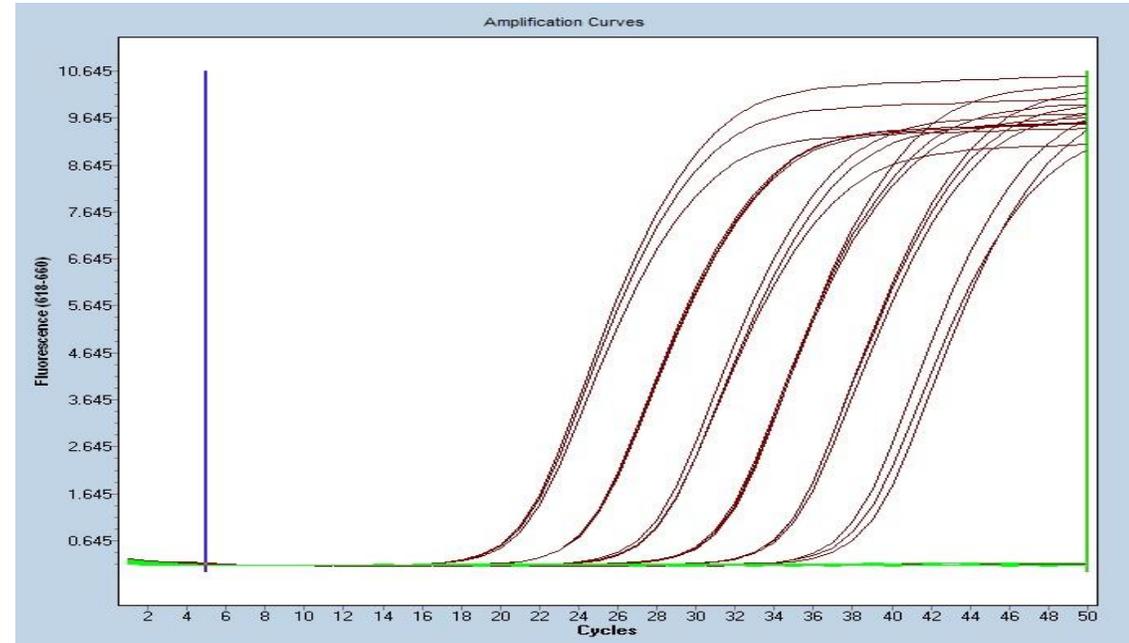

# Identifying a DNA locus for specific *Fof* R2 detection

- Compared first with other *F. oxysporum* f. sp. *fragariae* genomes to identify unique sequences.
- Then screened these unique sequences against online databases
  - 1,328 *Fusarium* spp.
  - 246,119,175 sequences in NCBI GenBank (2.1 trillion nucleotides)
- Only one DNA locus was a good candidate after filtering

# qPCR TaqMan assay design

- Collaborated with Dr. Thien Ho from Driscoll's on primer and probe design
- Efficiency = 96.4%
- Consistent linear detection to the 100fg level.
- Detection at lower DNA concentrations was sporadic - one of six 10 fg samples and two of six 1 fg samples amplified.

# qPCR TaqMan assay validation

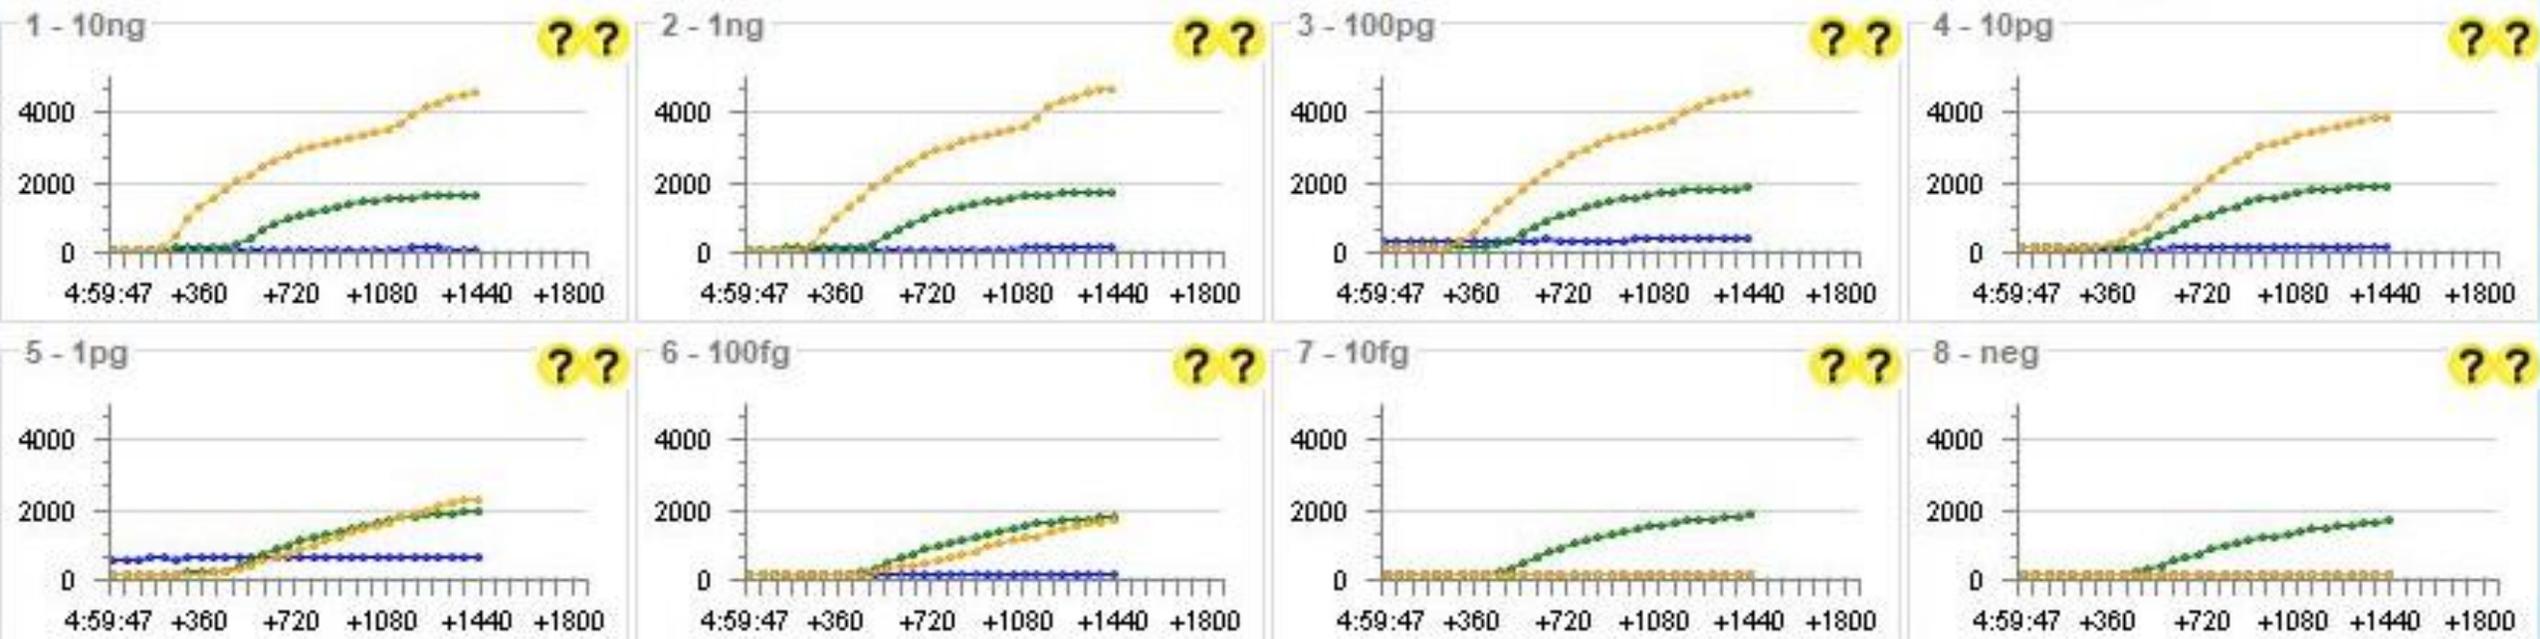

- Validated against DNA from 205 isolates of *F. oxysporum* that were either:
  - Isolated from strawberry plants
  - Pathogenic to strawberry
  - Common in coastal CA

	qPCR positive	qPCR negative
CA <i>Fof</i> race 2	58	0
Off-target	0	147

# Recombinase polymerase (RPA) assay

- RPA assay sensitive to 100 femtograms of DNA
- 100% analytical specificity to CA *Fof* race 2

	RPA positive	RPA negative
CA <i>Fof</i> race 2	52	0
Off-target	0	48

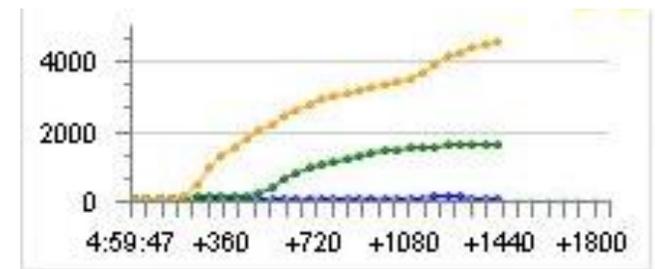

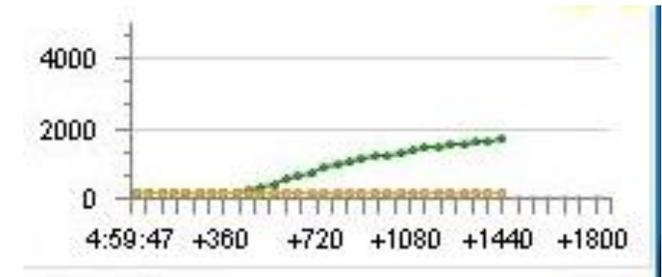

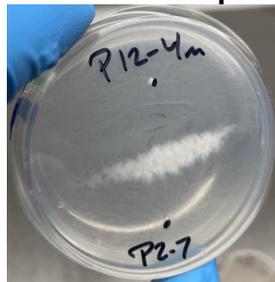

# Recombinase polymerase (RPA) assay validation

	RPA positive	RPA negative
Petiole assay positive	13	1
Petiole assay negative	0	47

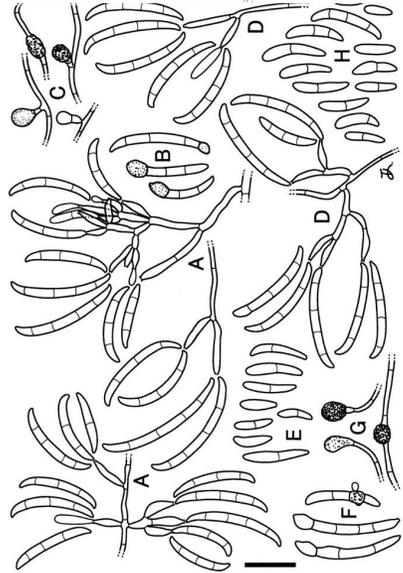

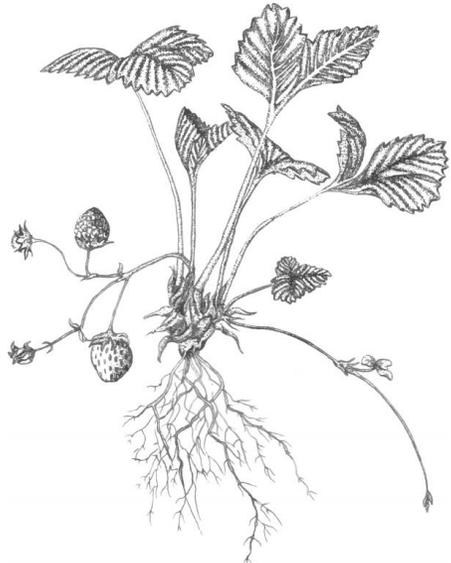

Petiole isolations  
&  
Single hyphal tip  
pure cultures

Somatic compatibility test

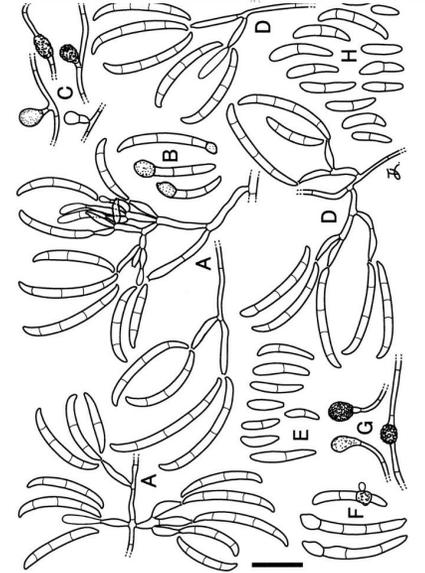

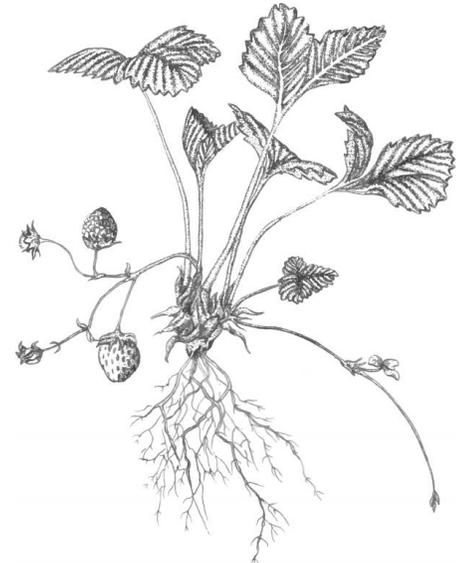

# Overview

Diagnostic methods  
development

Surveillance for CA *Fof* race 2

Screening for resistant cultivars

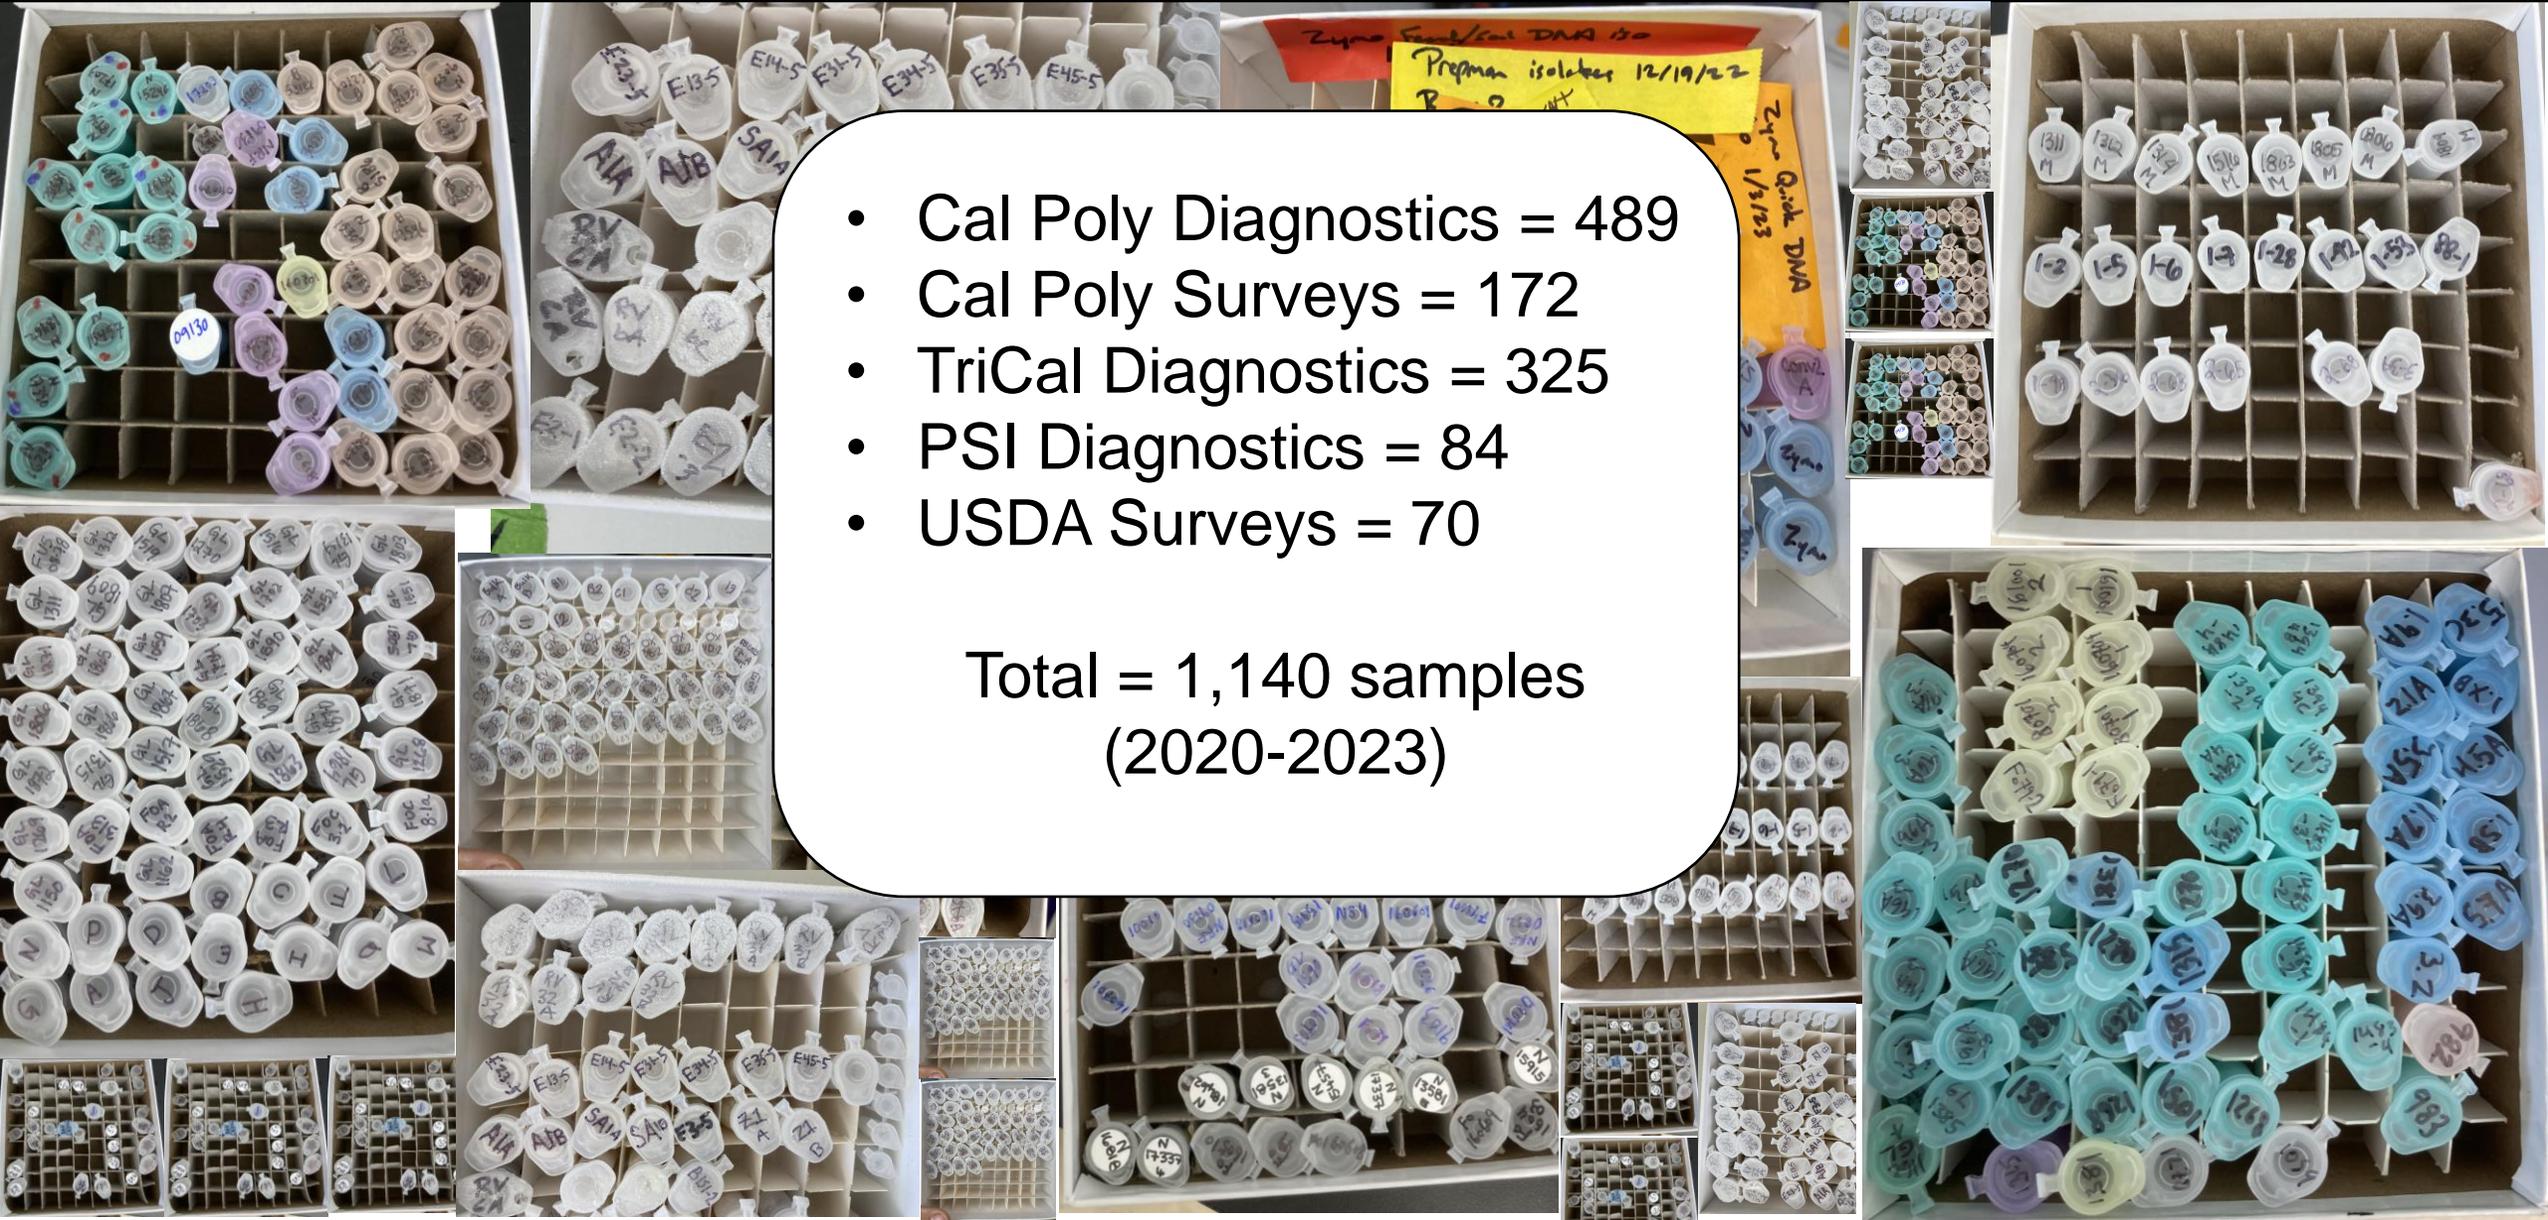

# In-field disease surveillance

# Freezer surveillance

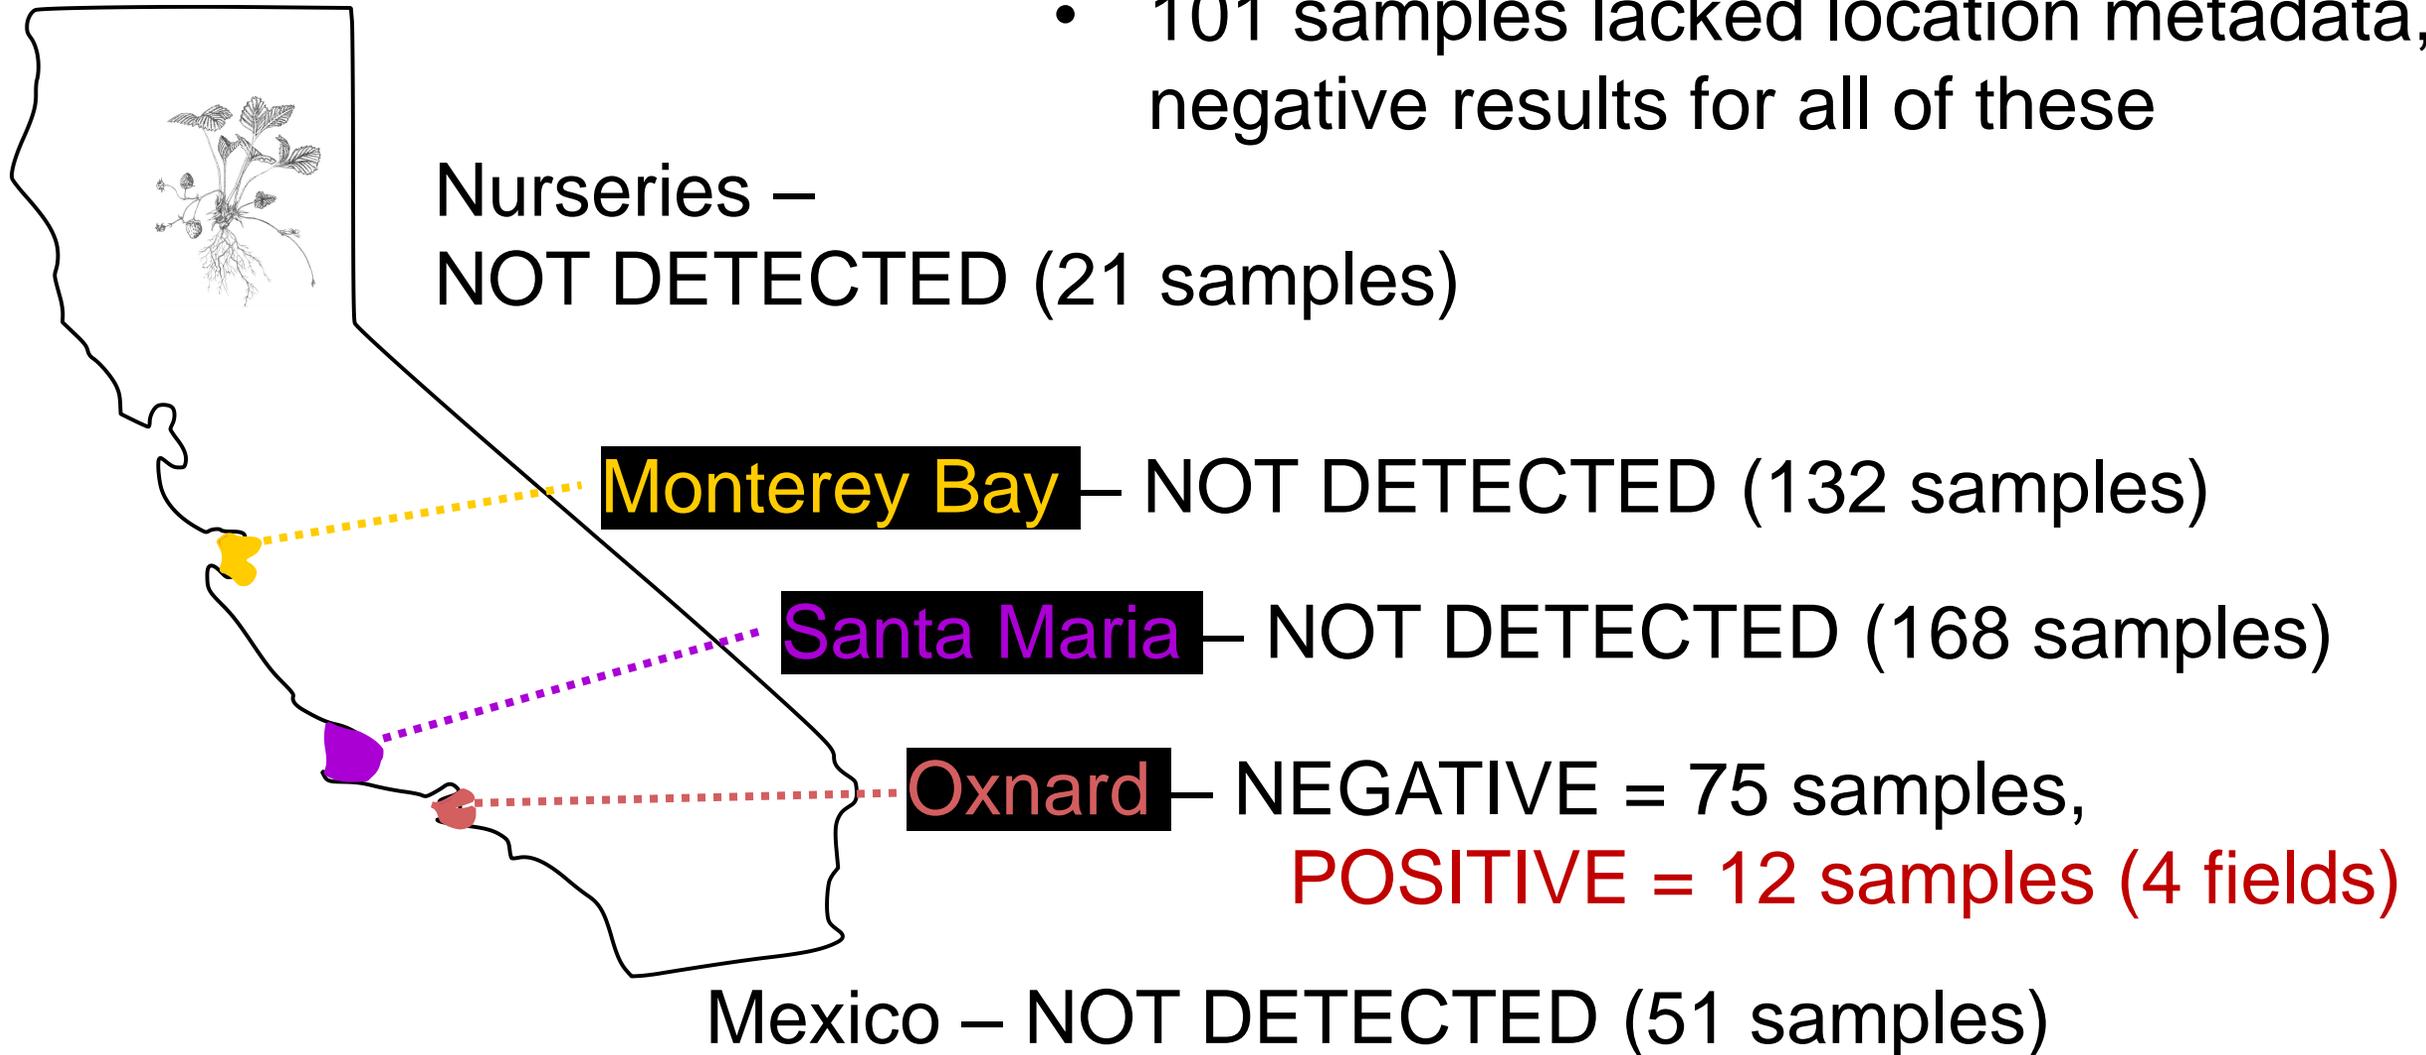

- Cal Poly Diagnostics = 489
- Cal Poly Surveys = 172
- TriCal Diagnostics = 325
- PSI Diagnostics = 84
- USDA Surveys = 70

Total = 1,140 samples  
(2020-2023)

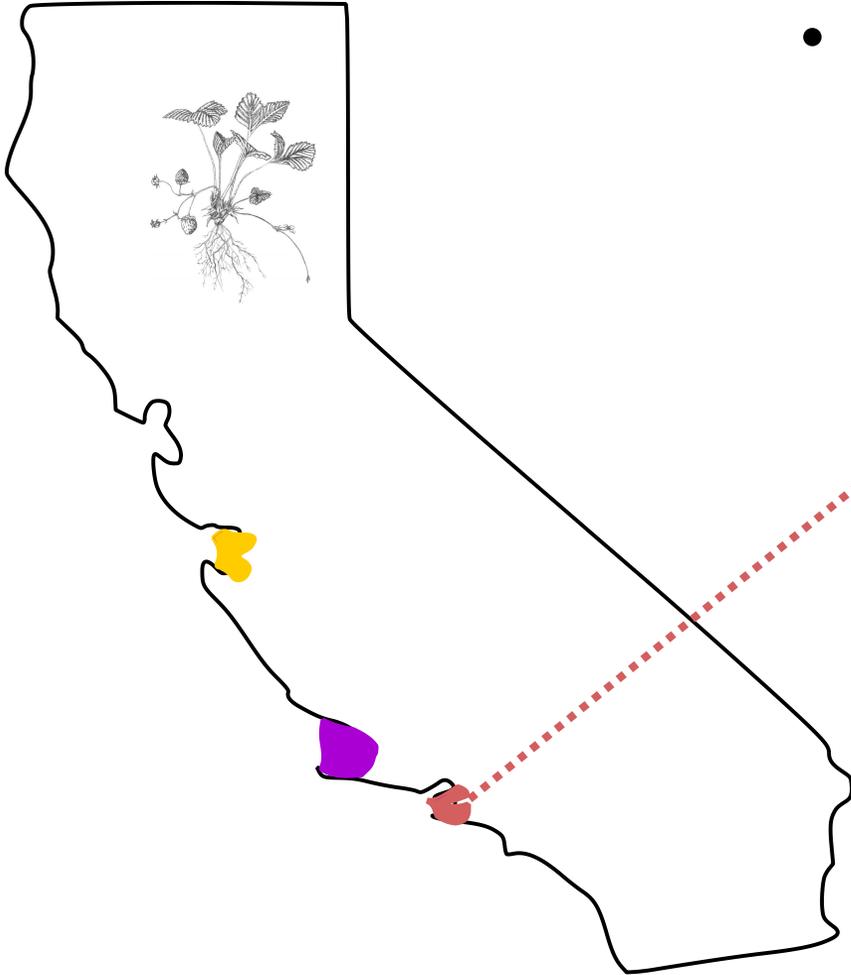

# Freezer and field surveillance results

- Tests for 555 samples are complete
- 101 samples lacked location metadata, negative results for all of these

# Current status of *Fof* race 2

- Despite extensive testing, *Fof* race 2 has still only been found in Oxnard

**Oxnard** — NEGATIVE = 75 samples,  
POSITIVE = 12 samples (4 fields)

- 3 summer-planted fields
- 3 fall-planted fields

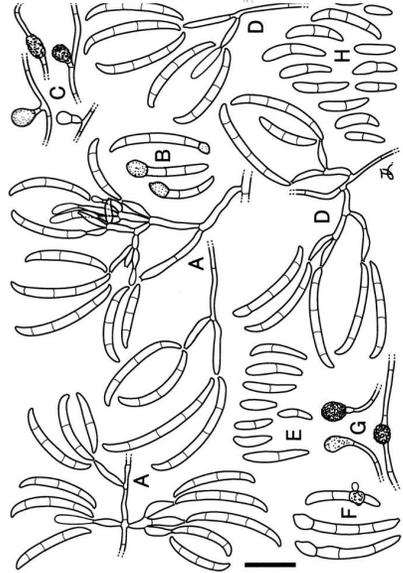

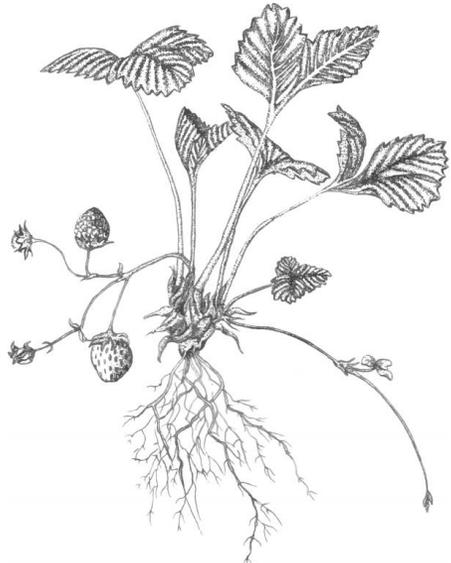

# *FW1*-resistance remains effective in most fields

*FW1* Resistant

Susceptible

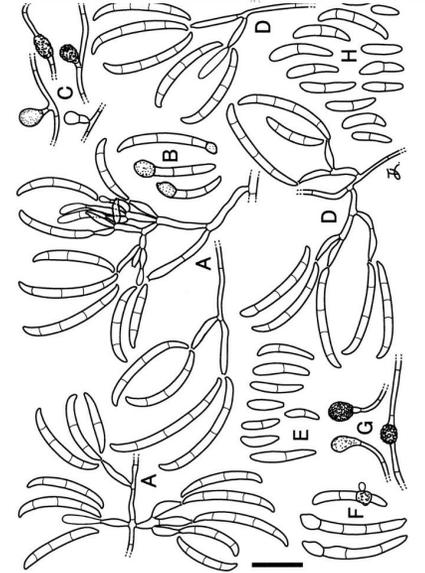

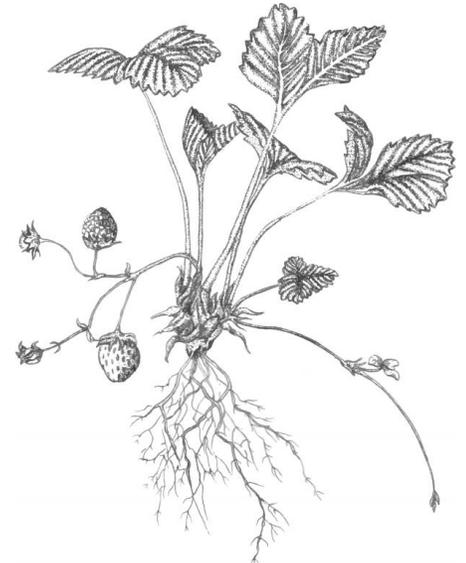

# Overview

Diagnostic methods  
development

Surveillance for CA *Fof* race 2

Screening for resistant cultivars

# No resistance sources identified for CA *Fof* race 2

## Wild or heirloom varieties that were not resistant:

- **199 varieties were Screened, none showed promising resistance to CA *Fof* race 2.**
- A larger panel of >400 varieties will be tested in collaboration with UCD

- FVC11-76
- FVC11-75
- FVC11-44
- FVC11-30
- FVC11-6
- K1
- US438
- Mollala
- Midway
- FL Ninety
- Wiltguard
- Earliglow
- Earlimiss
- NC 95-21-1
- NC 96-48-1
- Darrow 72
- PI 616652
- MD 4987
- MD 683
- Pelican
- PI 551575

# Takeaways

- **In the 10 months since discovering CA Fof race 2 in Oxnard:**
- qPCR and RPA assays were developed and technically validated.
- RPA diagnostic validation results are promising and on-going
- >500 samples from diseased strawberry plants only show detection in Oxnard
- 199 varieties screened, none are resistant
